

# OptiVantage: **A New Standard in Metal Powder Quality**

Integrating Quality and Consistency to  
Transform Scrap Material into Superior Powder

## **What is OptiVantage?**

OptiVantage is Continuum Powders' proprietary quality framework, designed to turn high-value scrap into premium, ASTM-grade metal powders through a series of interdependent, rigorously managed processes. It sets the standard for consistency, reliability, and performance in sustainable powder production.

# The OptiVantage Matrix: Five Pillars of Differentiation

## 1. Guaranteed Quality Assurance

Comprehensive, multi-step QA process covering chemical analysis, particle size distribution, and flowability for every batch.

## 2. End-to-End Logistics Coordination

Fully managed network ensures streamlined material collection, transportation, and delivery.

## 3. Strategic Scrap Sourcing

Vetted scrap partners provide a reliable supply of traceable, high-quality raw materials.

## 4. In-House Analytical Chemistry Labs

Onsite labs deliver real-time chemical analysis and precision control over powder composition.

## 5. Advanced Scrap Treatment Solutions

Pre-processing steps such as cleaning, etching, and inspection prepare scrap for conversion, ensuring powder integrity from the start.

## Why It Matters:

OptiVantage provides the assurance manufacturers need when performance and consistency are non-negotiable. It empowers customers to achieve supply chain resilience, cost efficiency, and sustainability—without sacrificing quality.

Let's talk about how  
OptiVantage can elevate  
your manufacturing process.

**OptiVantage**, where quality, sustainability  
and performance come full circle.
